1. Introduction

1.1 Purpose

This Software Requirements Specification defines the requirements for AHA Teams, a web-based system used by students and teachers for course material and assignment work. The document records the agreed system behaviour before design and implementation. It is intended for the project team, the course supervisor, and anyone reviewing or testing the system.

1.2 Scope

AHA Teams supports the day-to-day exchange of course material and assignments between students and teachers. Teachers can upload course material, create assignments, set deadlines and the late-submission policy, view student submissions and their versions, and provide feedback. Students can view course material and assignments, submit or resubmit assignment files, and view feedback.

Students are assumed to be enrolled in their relevant courses before they use AHA Teams. Course registration and administrator management are therefore outside the current SRS. To-do list management and custom assignment reminders are also outside the final scope. System-generated notifications may still be produced when new material, assignments, or feedback become available, but receiving a notification is not treated as a separate use case.

1.3 Definitions, Acronyms, and Abbreviations

Term	Definition
AHA Teams	The name of the Student-Teacher Course Communication and Assignment Management System.
SRS	Software Requirements Specification.
Student	A user who views course material and assignments, submits work, resubmits new versions, and views feedback.
Teacher	A faculty user who uploads material, creates assignments, controls deadlines and late policy, reviews submissions, and gives feedback.
Course	A subject for which a teacher provides material and assignments and in which the student is already enrolled.
Course Material	A lecture, note, file, or other academic material uploaded for a course.
Assignment	A task created by a teacher with a description, deadline, and late-submission policy.
Submission	A student response to an assignment.
Submission Version	One stored version of a submission. New versions do not overwrite earlier versions.
Late Policy	The teacher-controlled setting that either allows or rejects submissions after the deadline.
Feedback	A teacher comment stored against a student submission.
Notification	A system-generated message about newly available material, assignments, or feedback.

1.5 Document Overview

Section 2 describes the system context, users, major functions, assumptions, and constraints. Section 3 records the detailed interfaces, functional use cases, data requirements, and quality requirements. The supplementary material contains the updated use case and domain models together with the final allocation of use cases to group members.

2. Overall Description

2.1 Product Perspective

AHA Teams is a standalone web-based academic system for communication through course material and assignment workflows. It keeps course-related files, assignments, submissions, submission versions, and feedback in one place. The current SRS focuses on Student and Teacher interactions. Enrollment data is treated as pre-existing system information rather than a function performed through this version of AHA Teams.

2.2 Product Functions

- Student and Teacher login using existing accounts.
- Teacher upload of course material for courses taught by that teacher.
- Student access to material for courses in which the student is already enrolled.
- Teacher creation of assignments with a deadline and teacher-controlled late-submission policy.
- Student viewing of assignment details, deadline, time remaining, and late policy.
- Student submission of assignment files with a timestamp and version number.
- Resubmission of corrected work while keeping earlier versions.
- Teacher access to student submissions and version history.
- Teacher feedback on submitted work and Student access to that feedback.
- System-generated notifications when relevant academic content or feedback becomes available.

2.3 User Characteristics

Student: A university student with basic experience using web applications. The student needs simple access to course material, assignment details, submission controls, version confirmation, and teacher feedback.

Teacher: A faculty member who manages academic material and assignments for assigned courses. The teacher needs clear controls for deadlines, late submissions, student work, version history, and feedback.

2.4 Constraints

- The system depends on an internet connection and a suitable device with a web browser.
- Access is role-based. Students and teachers must only use functions allowed for their role.
- Students may access course information only for courses in which they are already enrolled.
- Teachers may manage material and assignments only for courses assigned to them.
- Assignment submission behaviour is controlled by the stored deadline and the teacher-selected late policy.
- New submission versions must be stored without overwriting earlier versions.
- File storage capacity and configured file validation rules may limit uploads.

2.5 Assumptions and Dependencies

- Student and Teacher accounts already exist before login.
- Students are already enrolled in the courses they need to access.
- Teachers are already associated with the courses they teach.
- Course, Student, and Teacher information is available to AHA Teams.

- Users have basic knowledge of web-based systems and access to the internet.
- A persistent database and file-storage service are available to store academic records and uploaded files.
- The notification mechanism can deliver system-generated messages to the relevant users.

2.6 Out-of-Scope Requirements

The following functions appeared in earlier project work but are not part of the final use-case set for this SRS: course registration, management of teachers/students/courses by an administrator, to-do list management, and custom assignment reminder setup. Notifications remain a system output rather than a separate user goal.

3. Specific Requirements

3.1 Functional Requirements (Use Cases)

The final scope contains twelve use cases. Six are documented by Muhammad Anas and six by Muhammad Hussnain Basharat. Login is shared by Student and Teacher but is assigned to Muhammad Anas for documentation.

UC-01 Login

Assigned Member	Muhammad Anas
Primary Actor	Student / Teacher
Supporting Actor	None
Description	Allows an existing Student or Teacher to enter AHA Teams using stored account credentials.
Preconditions	The user already has an account in the system.
Inputs	Email address; password.
Outputs	Authenticated access to the appropriate dashboard, or an error message when the credentials are not accepted.
Postconditions	On success, the user has an authenticated session with role-appropriate access. On failure, no session is created.
Main Success Scenario	1. The user opens the login page. 2. The user enters an email address and password. 3. The system checks the credentials against the stored account. 4. The system identifies the user role. 5. The system opens the Student or Teacher dashboard.
Alternative Flows	4a. If the stored role is Student, the Student dashboard is opened. 4b. If the stored role is Teacher, the Teacher dashboard is opened.
Exception Flows	3a. If the email or password is not accepted, the system denies access and displays a login error.

Associated Functional Requirements

FR-01.1 The system shall authenticate existing Student and Teacher accounts before protected functions are made available.

FR-01.2 The system shall deny access and display an error when submitted credentials are not accepted.

FR-01.3 The system shall provide role-appropriate access after successful login.

UC-02 View Course Material

Assigned Member	Muhammad Anas
Primary Actor	Student
Supporting Actor	Teacher (uploads the material)
Description	Allows a Student to view or open material uploaded for a course in which the Student is already enrolled.
Preconditions	The Student is logged in and is already enrolled in the selected course. Course material has been uploaded for that course.
Inputs	Selected course; selected course material.
Outputs	List of available course material and the selected material/file, or an availability error.
Postconditions	The requested material is displayed or made available to the Student. No academic record is changed.
Main Success Scenario	1. The Student opens a course. 2. The system lists available course material for that course. 3. The Student selects an item. 4. The system retrieves the selected material. 5. The system displays the material or provides the file to the Student.
Alternative Flows	2a. If no material is available, the system shows an empty material list.
Exception Flows	4a. If the stored file cannot be retrieved, the system displays an error and leaves the material record unchanged.

Associated Functional Requirements

FR-02.1 The system shall list course material only for courses available to the logged-in Student.

FR-02.2 The system shall allow the Student to open or obtain an available course-material file.

FR-02.3 The system shall display an error if the selected stored file cannot be retrieved.

UC-03 View Assignment

Assigned Member	Muhammad Anas
Primary Actor	Student
Supporting Actor	Teacher (creates the assignment)
Description	Allows a Student to view an assignment and the information needed before submission.
Preconditions	The Student is logged in, is already enrolled in the course, and the Teacher has created the assignment.
Inputs	Selected course; selected assignment.
Outputs	Assignment title, description, deadline, time remaining, and current late-submission policy.
Postconditions	The assignment details are displayed. No submission is created by this use case.
Main Success Scenario	1. The Student opens a course.

	2. The system lists assignments available in that course. 3. The Student selects an assignment. 4. The system retrieves the assignment details. 5. The system displays the description, deadline, time remaining, and whether late submission is allowed or rejected.
Alternative Flows	2a. If there are no assignments, the system shows an empty assignment list.
Exception Flows	4a. If the assignment record is unavailable, the system displays an error and does not show incomplete details.

Associated Functional Requirements

FR-03.1 The system shall display assignments for courses available to the logged-in Student.

FR-03.2 The system shall display the stored assignment deadline and late-submission policy.

FR-03.3 The system shall show the time remaining until the stored deadline.

UC-04 Submit Assignment

Assigned Member	Muhammad Anas
Primary Actor	Student
Supporting Actor	Teacher (sets deadline and late policy)
Description	Allows a Student to submit an assignment file. The system checks the deadline, applies the Teacher's late policy, validates the file, and stores the first submission version.
Preconditions	The Student is logged in and already enrolled in the course. The assignment exists with a deadline and late policy.
Inputs	Selected assignment; submission file.
Outputs	Submission confirmation; version number; submission timestamp; late status when applicable; or an error message.
Postconditions	A valid submission is stored with a timestamp and version number. If it was accepted after the deadline, it is marked late.
Main Success Scenario	1. The Student selects an assignment. 2. The system displays the assignment and current deadline information. 3. The Student attaches a file and chooses Submit. 4. The system checks the assignment deadline and late policy. 5. The system validates the submitted file against configured upload rules. 6. The system creates the submission and stores the file as version 1. 7. The system records the submission time and late status. 8. The system displays a confirmation with the stored version information.
Alternative Flows	4a. If the deadline has passed and late submissions are allowed, the system continues and records the submission as late. 4b. If the Student already has a submission, the Resubmit Assignment use case applies instead of creating another version 1.
Exception Flows	4c. If the deadline has passed and the Teacher rejects late submissions, the system blocks the submission and shows that the deadline is closed. 5a. If the file fails configured validation, the system displays an error and does not store the submission. 6a. If storage fails, the system saves no partial submission and allows the Student to retry.

Associated Functional Requirements

FR-04.1 The system shall check the stored deadline and late policy before accepting an assignment file.

FR-04.2 The system shall block a late submission when the Teacher has selected Reject Late.

FR-04.3 The system shall accept and mark the submission as late when the deadline has passed and the Teacher has selected Allow Late.

FR-04.4 The system shall store an accepted first submission as version 1 with a timestamp.

UC-05 Resubmit Assignment

Assigned Member	Muhammad Anas
Primary Actor	Student
Supporting Actor	Teacher (sets deadline and late policy)
Description	Allows a Student who already submitted an assignment to upload a corrected file as the next version without deleting earlier versions.
Preconditions	The Student is logged in, is enrolled in the course, and already has at least one stored version for the selected assignment.
Inputs	Selected assignment; new submission file.
Outputs	New version number; upload timestamp; late status when applicable; confirmation; or an error message.
Postconditions	The new file is stored as the next SubmissionVersion and all earlier versions remain available.
Main Success Scenario	1. The Student opens an assignment that already has a submission. 2. The system shows the current submission and available version information. 3. The Student selects a new file and chooses Resubmit. 4. The system checks the deadline and late policy. 5. The system validates the new file. 6. The system determines the next version number. 7. The system stores the file as the next version and records the upload time. 8. The system displays confirmation of the new version.
Alternative Flows	4a. If the deadline has passed and late submissions are allowed, the new version is stored and marked as part of a late submission.
Exception Flows	4b. If the deadline has passed and late submissions are rejected, the system blocks the resubmission. 5a. If the file fails configured validation, the system displays an error and keeps all existing versions unchanged. 7a. If storage fails, the system keeps all existing versions unchanged and allows the Student to retry.

Associated Functional Requirements

FR-05.1 The system shall assign the next version number to an accepted resubmission.

FR-05.2 The system shall retain all earlier submission versions when a new version is stored.

FR-05.3 The system shall apply the same deadline and late-policy checks to resubmission as to the first submission.

UC-06 View Feedback

Assigned Member	Muhammad Anas
Primary Actor	Student
Supporting Actor	Teacher (provides the feedback)
Description	Allows a Student to read feedback that a Teacher has stored for a submission.
Preconditions	The Student is logged in and has a submission for the selected assignment.
Inputs	Selected course; selected assignment/submission.
Outputs	Teacher feedback comment and feedback date/time, or a message that feedback is not yet available.
Postconditions	The feedback is displayed without changing the stored submission or feedback record.
Main Success Scenario	1. The Student opens the relevant course and assignment. 2. The Student selects the submitted work or feedback option. 3. The system retrieves feedback linked to that submission. 4. The system displays the feedback comment and the date/time it was given.
Alternative Flows	3a. If no feedback has been stored, the system shows that feedback is not yet available.
Exception Flows	3b. If the feedback record cannot be retrieved, the system displays an error and does not modify existing data.

Associated Functional Requirements

FR-06.1 The system shall allow a Student to view feedback linked to that Student's submission.

FR-06.2 The system shall display the stored feedback comment and date/time.

FR-06.3 The system shall indicate when no feedback is currently available.

UC-07 Upload Course Material

Assigned Member	Muhammad Hussnain Basharat
Primary Actor	Teacher
Supporting Actor	Student (receives access after upload)
Description	Allows a Teacher to upload lecture files, notes, or other course material for a course taught by that Teacher.
Preconditions	The Teacher is logged in and is associated with the selected course.
Inputs	Selected course; material title; material file.
Outputs	Stored course-material record; upload confirmation; system notification event for relevant students when enabled.
Postconditions	The material is stored for the selected course and is available to its enrolled students.
Main Success Scenario	1. The Teacher opens a course. 2. The Teacher chooses to upload course material. 3. The Teacher enters a material title and selects a file. 4. The system validates the supplied information and file against configured upload rules. 5. The system stores the file and records the upload time.

	6. The system confirms the upload and makes the material available to relevant students.
Alternative Flows	6a. After a successful upload, the system may create a notification for the relevant students.
Exception Flows	4a. If required information is missing or the file fails configured validation, the system displays an error and does not save the material. 5a. If storage fails, the system saves no incomplete material record and allows the Teacher to retry.

Associated Functional Requirements

FR-07.1 The system shall allow a Teacher to upload course material only for a course associated with that Teacher.

FR-07.2 The system shall store the material title, file, and upload time.

FR-07.3 The system shall make successfully uploaded material available to students enrolled in the course.

UC-08 Create / Upload Assignment

Assigned Member	Muhammad Hussnain Basharat
Primary Actor	Teacher
Supporting Actor	Student (views the published assignment)
Description	Allows a Teacher to create an assignment for a course. The assignment includes its academic content and uses UC-09 to store the deadline and late policy.
Preconditions	The Teacher is logged in and is associated with the selected course.
Inputs	Selected course; assignment title; description; assignment content/file; deadline and late-policy values through UC-09.
Outputs	Stored assignment made available to relevant students; creation confirmation; system notification event when enabled.
Postconditions	A complete assignment record exists for the course with its deadline and late policy.
Main Success Scenario	1. The Teacher opens a course. 2. The Teacher chooses to create an assignment. 3. The Teacher enters the assignment title and description and, when needed, attaches assignment material. 4. The Teacher sets the assignment deadline and late policy through UC-09. 5. The system validates the required assignment information. 6. The system stores the assignment for the selected course. 7. The system confirms creation and makes the assignment available to relevant students.
Alternative Flows	7a. After creation, the system may create a notification for relevant students.
Exception Flows	5a. If required information is missing, the system displays an error and does not publish the assignment. 6a. If storage fails, the system does not create a partial assignment and allows the Teacher to retry.

Associated Functional Requirements

FR-08.1 The system shall allow a Teacher to create an assignment for a course associated with that Teacher.

FR-08.2 The system shall store the assignment title and description together with its course relationship.

FR-08.3 The system shall require a deadline and late policy before the assignment is treated as complete.

FR-08.4 The system shall make a successfully created assignment available to students enrolled in the course.

UC-09 Set Assignment Deadline and Late Policy

Assigned Member	Muhammad Hussnain Basharat
Primary Actor	Teacher
Supporting Actor	None
Description	Allows a Teacher to set or update the date/time by which an assignment is due and select whether submissions after that time are allowed or rejected.
Preconditions	The Teacher is logged in, is associated with the course, and has selected an assignment being created or updated.
Inputs	Selected assignment; deadline date/time; Allow Late or Reject Late selection.
Outputs	Stored deadline and late-policy values; confirmation or validation error.
Postconditions	The assignment has one current deadline and one current late-submission policy used by submission checks.
Main Success Scenario	1. The Teacher opens the assignment settings. 2. The Teacher enters or selects the deadline date/time. 3. The Teacher chooses Allow Late or Reject Late. 4. The system validates that the required values are present and in a valid date/time format. 5. The system stores the deadline and late-policy values. 6. The system displays the saved settings.
Alternative Flows	1a. The use case may be started while UC-08 Create / Upload Assignment is in progress or when updating an existing assignment.
Exception Flows	4a. If the deadline value is missing or has an invalid format, the system displays an error and keeps the previous stored value unchanged. 4b. If no late-policy option is selected, the system asks the Teacher to choose one before saving.

Associated Functional Requirements

FR-09.1 The system shall store a deadline date/time for each assignment.

FR-09.2 The system shall store the Teacher's late policy as either Allow Late or Reject Late.

FR-09.3 The system shall use the stored deadline and late policy when processing Student submissions and resubmissions.

UC-10 View Student Submission

Assigned Member	Muhammad Hussnain Basharat
Primary Actor	Teacher

Supporting Actor	Student (creates the submission)
Description	Allows a Teacher to inspect submitted work for an assignment in a course taught by that Teacher.
Preconditions	The Teacher is logged in and associated with the course. The selected assignment exists.
Inputs	Selected course; selected assignment; selected Student/submission.
Outputs	Submitted file information, submission timestamp, late status, and access to the stored submission.
Postconditions	The selected submission is displayed. No submission content is changed.
Main Success Scenario	1. The Teacher opens a course and assignment. 2. The system lists Students and available submissions for the assignment. 3. The Teacher selects a Student submission. 4. The system retrieves the submission record. 5. The system displays the submission timestamp, late status, and available file/version information. 6. The Teacher may open the submitted file.
Alternative Flows	2a. If a Student has not submitted work, the system shows that no submission is available for that Student. 5a. If multiple versions exist, the Teacher may continue with UC-11 View Submission Versions.
Exception Flows	4a. If the submission record or stored file cannot be retrieved, the system displays an error and makes no data changes.

Associated Functional Requirements

FR-10.1 The system shall allow a Teacher to view submissions for assignments in courses associated with that Teacher.

FR-10.2 The system shall display the submission timestamp and whether the submission is marked late.

FR-10.3 The system shall indicate when no submission exists for a selected Student.

UC-11 View Submission Versions

Assigned Member	Muhammad Hussnain Basharat
Primary Actor	Teacher
Supporting Actor	Student (creates the versions)
Description	Allows a Teacher to inspect the version history of a Student submission without losing access to earlier files.
Preconditions	The Teacher is logged in and has opened a Student submission. At least one submission version exists.
Inputs	Selected Student submission; optional selected version.
Outputs	Version list containing version number, file information, and upload time; selected version file when opened.
Postconditions	The requested version information is displayed. Stored versions remain unchanged.
Main Success Scenario	1. The Teacher opens a Student submission.

	2. The Teacher chooses to view version history. 3. The system retrieves all SubmissionVersion records for that submission. 4. The system lists the versions in version order with their upload information. 5. The Teacher selects a version when a specific file is needed. 6. The system provides the selected stored version.
Alternative Flows	4a. If only one version exists, the system displays that single version.
Exception Flows	3a. If version history cannot be retrieved, the system displays an error without changing the stored submission. 6a. If the selected version file is unavailable, the system displays an error and leaves the version record unchanged.

Associated Functional Requirements

FR-11.1 The system shall retain and list all stored versions of a Student submission.

FR-11.2 The system shall display the version number and upload time for each version.

FR-11.3 The system shall allow the Teacher to access a selected stored version without modifying earlier versions.

UC-12 Provide Feedback

Assigned Member	Muhammad Hussnain Basharat
Primary Actor	Teacher
Supporting Actor	Student (views the feedback)
Description	Allows a Teacher to store a feedback comment for a Student submission.
Preconditions	The Teacher is logged in, is associated with the course, and the selected Student submission exists.
Inputs	Selected Student submission; feedback comment.
Outputs	Stored feedback record with date/time; confirmation; system notification event for the Student when enabled.
Postconditions	The feedback is linked to the selected submission and can be viewed by the Student through UC-06.
Main Success Scenario	1. The Teacher opens a Student submission. 2. The Teacher chooses to provide feedback. 3. The Teacher enters a feedback comment. 4. The system checks that the required comment is present. 5. The system stores the feedback with the current date/time and links it to the submission. 6. The system confirms that the feedback was saved.
Alternative Flows	6a. After feedback is saved, the system may create a notification for the Student.
Exception Flows	4a. If the required feedback comment is empty, the system asks the Teacher to enter a comment before saving. 5a. If the feedback cannot be stored, the system displays an error and does not create a partial feedback record.

Associated Functional Requirements

FR-12.1 The system shall allow a Teacher to store feedback for a Student submission in a course associated with that Teacher.

FR-12.2 The system shall link each stored feedback record to its submission and record the date/time it was given.

FR-12.3 The system shall make stored feedback available to the Student who owns the submission.

3.2 Software System Attributes

3.2.1 Security

SEC-01 The system shall require successful login before Student or Teacher functions are available.

SEC-02 A Student shall only access course material, assignments, submissions, and feedback that belong to courses available to that Student.

SEC-03 A Teacher shall only manage academic content and submissions for courses associated with that Teacher.

SEC-04 The system shall keep Student submission records separate so that one Student cannot access another Student's submission through normal Student functions.

3.2.2 Reliability

REL-01 The system shall keep earlier submission versions unchanged when a new version is accepted.

REL-02 If a submission, material upload, assignment creation, or feedback save fails, the system shall report the failure and avoid creating a misleading completed record.

REL-03 Stored feedback shall remain linked to the submission for which it was created.

3.3.3 Usability

USE-01 The system shall provide clear Student and Teacher navigation for the functions assigned to each role.

USE-02 The system shall display clear confirmation or error messages after file submission and upload actions.

USE-03 Assignment screens shall show the deadline and late policy so that the Student can understand the current submission condition.

3.2.4 Portability and Access

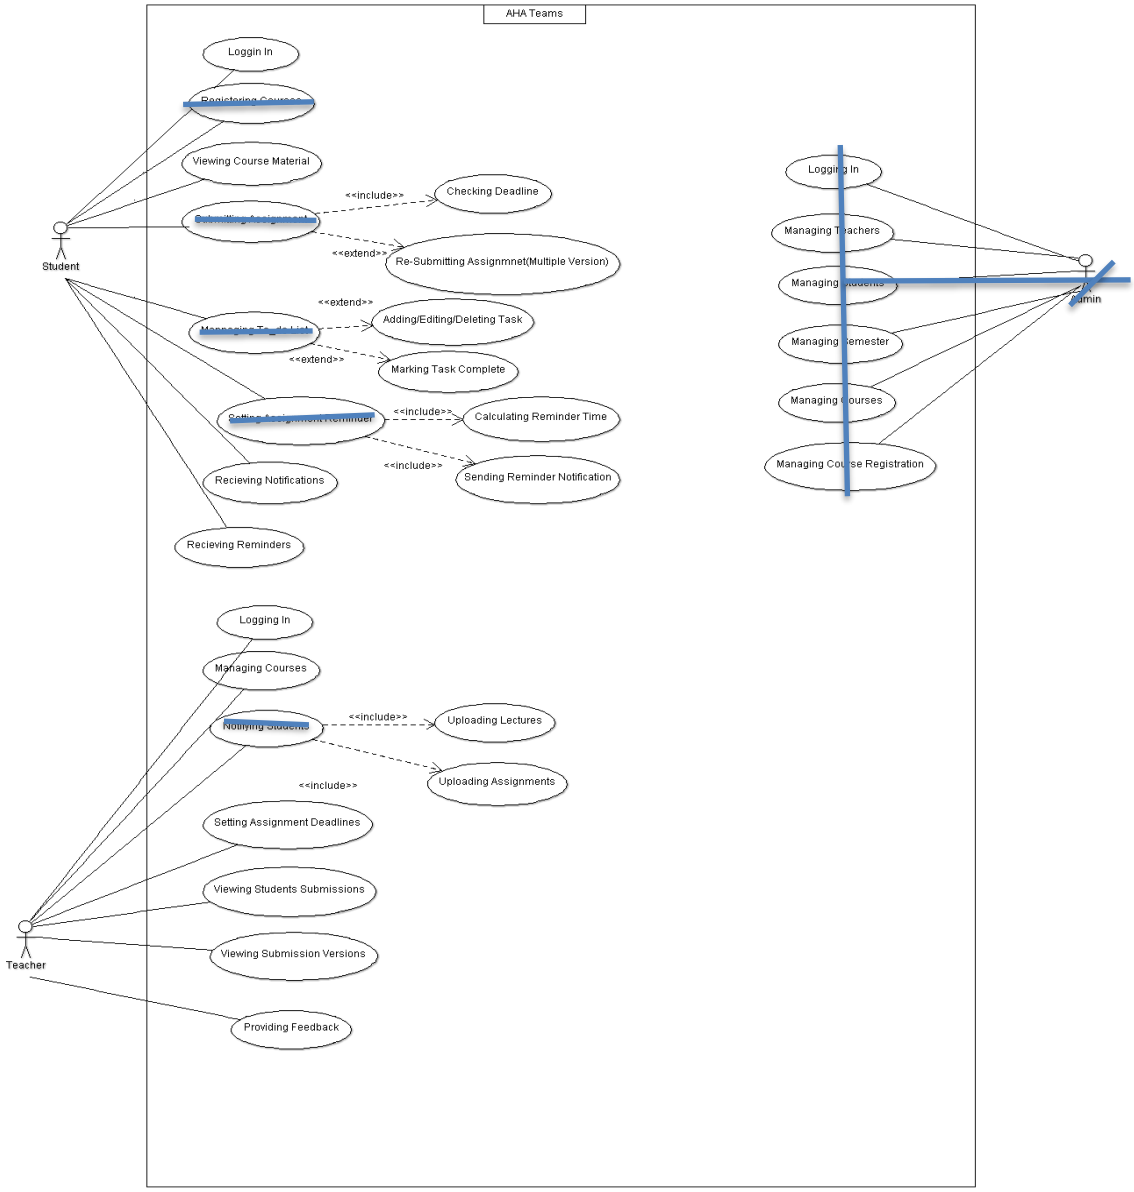

AHA Teams shall be accessible through a standard web browser on an internet-connected device. No device-specific hardware is required by the current requirements.

3.7 Other Requirements

Notifications are treated as system outputs rather than separate use cases. A successful course-material upload, assignment publication, or feedback submission may create a notification for the relevant Student users. Custom reminder setup is not part of the final SRS.

Appendix A. Use Case Diagram

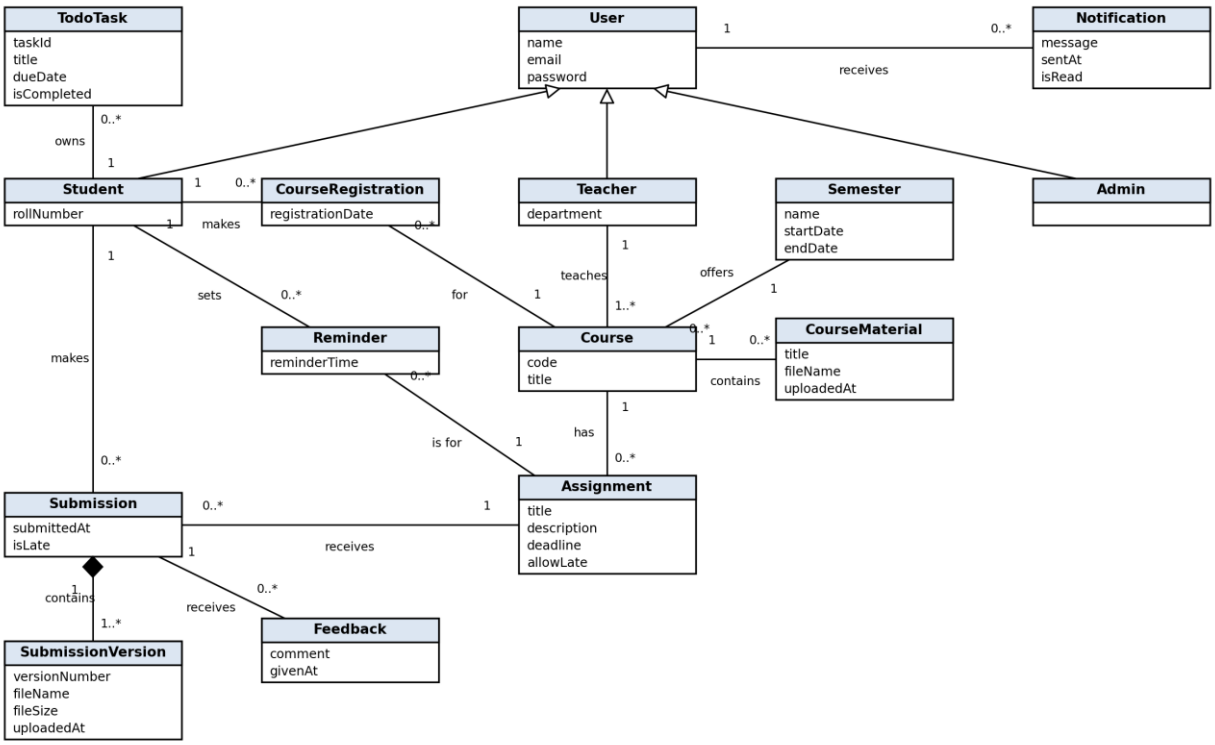

The final use-case scope used in this SRS. It contains only Student and Teacher actors. Course registration, administrator management, to-do lists, and custom reminder setup are not included in the final use-case set.

Appendix B. Domain Model

Submission and SubmissionVersion remain separate so that resubmissions do not overwrite earlier files.

S

Appendix C. Use Case Allocation and Traceability

Use Case	Primary Actor	Assigned Member	Requirement IDs
UC-01 Login	Student / Teacher	Muhammad Anas	FR-01.1, FR-01.2, FR-01.3
UC-02 View Course Material	Student	Muhammad Anas	FR-02.1, FR-02.2, FR-02.3
UC-03 View Assignment	Student	Muhammad Anas	FR-03.1, FR-03.2, FR-03.3
UC-04 Submit Assignment	Student	Muhammad Anas	FR-04.1, FR-04.2, FR-04.3, FR-04.4
UC-05 Resubmit Assignment	Student	Muhammad Anas	FR-05.1, FR-05.2, FR-05.3
UC-06 View Feedback	Student	Muhammad Anas	FR-06.1, FR-06.2, FR-06.3
UC-07 Upload Course Material	Teacher	Muhammad Hussnain Basharat	FR-07.1, FR-07.2, FR-07.3
UC-08 Create / Upload Assignment	Teacher	Muhammad Hussnain Basharat	FR-08.1, FR-08.2, FR-08.3, FR-08.4
UC-09 Set Assignment Deadline and Late Policy	Teacher	Muhammad Hussnain Basharat	FR-09.1, FR-09.2, FR-09.3
UC-10 View Student Submission	Teacher	Muhammad Hussnain Basharat	FR-10.1, FR-10.2, FR-10.3
UC-11 View Submission Versions	Teacher	Muhammad Hussnain Basharat	FR-11.1, FR-11.2, FR-11.3
UC-12 Provide Feedback	Teacher	Muhammad Hussnain Basharat	FR-12.1, FR-12.2, FR-12.3
